ABSTRACT OF THE DISCLOSURE

2

3 A rotary cutting tool with easy to adjust rotary die plates comprises a rotary
4 die cylinder, a die plate adjustably mounted to the rotary die cylinder, an external
5 eccentric mounted on the rotary die cylinder having a first axis of rotation with
6 respect to the cylinder and having a central opening offset from the first axis, and an
7 internal eccentric mounted in the central opening. Rotation of the external eccentric
8 urges the internal eccentric to move with respect to the cylinder, and the die plate
9 moves in response to motion of the internal eccentric.
